

**Memorandum of Understanding
By and Between IBEW Local Union 8
and the Ohio/Michigan Chapter of NECA**

Whereas the National Electrical Contractors Association, Ohio/Michigan Chapter and IBEW Local 8 both recognize the need to address the current coronavirus COVID-19 pandemic and its impact on both the employees and the contractors. And whereas the Memorandum of Understanding of March 16, 2020 has been cancelled effective October 11, 2020. The parties now agree to the following terms and conditions for implementation effective October 12, 2020:

1. Employees on the Out-of-Work Book or who are furloughed with a contractor who, by CDC guidelines are defined as “at increased risk of severe illness” should they contract COVID-19, will be allowed to if eligible otherwise receive the subsidized H & W self-pay rate. Any individual 65 or older is considered in this group. Attached is a CDC publication which gives the guidelines for others included who are 64 years old or younger. For employees on the Out-of-Work Book who meet these criteria after three nicks, they shall lose eligibility to collect ERP, but will remain eligible for the subsidized H & W self-pay rate as long as they would otherwise be eligible.
2. Employees who are on the Out-of-Work Book or who are furloughed that are legitimately quarantined per the Center for Disease and Control (CDC) guidelines will also be allowed to if eligible otherwise receive the subsidized H & W self-pay rate. If they are on the Book, they will not receive any nicks during the time of their legitimate quarantine. Attached is a CDC publication which gives the guidelines for legitimate quarantines. If an individual under these circumstances qualifies for State unemployment, they shall also be eligible for an ERP benefit as long as they would be otherwise eligible.
3. If a jobsite is shut down due to an outbreak of COVID-19, employees may furlough with the contractor or take a lay-off and still be entitled to subsidized self-pays for H & W if they are otherwise eligible. They will also be entitled to ERP as long as they are otherwise eligible.
4. This MOU will not interfere with the National Disease Emergency Response Agreement that will be recognized by both parties.

This Memorandum of Understanding shall remain in effect until either party gives notice to cancel. It is agreed that the parties will work to establish a mutually agreeable date for cancellation, but at minimum, it shall be in effect for a minimum of one week from the date of notice.

In Witness hereof, the parties have executed this Agreement to be effective on October 16, 2020.

For the Employer,
Ohio/Michigan Chapter, NECA

For the Union,
I.B.E.W. Local Union #8

Todd T. Michaelsen, Chapter Manager

Date

People with Certain Medical Conditions

Updated Oct. 6, 2020

Summary of Recent Changes

Revisions were made on October 6, 2020 to reflect recent data supporting increased risk of severe illness from the virus that causes COVID-19 among adults with COVID-19 who have obesity, who have overweight, or who smoke or have a history of smoking. These revisions also make the document more explicit about data and implications for adults and for children. The listed underlying medical conditions in children were also revised to indicate that these conditions might increase risk to better reflect the quality of available data currently. This reflects the fact that there are less data available for children and does not imply that children are not at risk. We are learning more about COVID-19 every day, and as new information becomes available, CDC will update the information below.

Adults of any age with certain underlying medical conditions are at increased risk for severe illness from the virus that causes COVID-19:

Adults of any age with the following conditions are at increased risk of severe illness from the virus that causes COVID-19:

- Cancer
- Chronic kidney disease
- COPD (chronic obstructive pulmonary disease)
- Heart conditions, such as heart failure, coronary artery disease, or cardiomyopathies
- Immunocompromised state (weakened immune system) from solid organ transplant
- Obesity (body mass index [BMI] of 30 kg/m² or higher but < 40 kg/m²)
- Severe Obesity (BMI ≥ 40 kg/m²)
- Sickle cell disease
- Smoking
- Type 2 diabetes mellitus

COVID-19 is a new disease. Currently there are limited data and information about the impact of underlying medical conditions and whether they increase the risk for severe illness from COVID-19. Based on what we know at this time, adults of any age with the following conditions might be at an increased risk for severe illness from the virus that causes COVID-19:

- Asthma (moderate-to-severe)
- Cerebrovascular disease (affects blood vessels and blood supply to the brain)
- Cystic fibrosis
- Hypertension or high blood pressure
- Immunocompromised state (weakened immune system) from blood or bone marrow transplant, immune deficiencies, HIV, use of corticosteroids, or use of other immune weakening medicines
- Neurologic conditions, such as dementia
- Liver disease
- Overweight (BMI ≥ 25 kg/m², but < 30 kg/m²)
- Pregnancy
- Pulmonary fibrosis (having damaged or scarred lung tissues)
- Thalassemia (a type of blood disorder)
- Type 1 diabetes mellitus

Want to see the evidence behind these lists?

While children have been less affected by COVID-19 compared to adults, children can be infected with the virus that causes COVID-19 and some children develop severe illness. Children with underlying medical conditions are at increased risk for severe illness compared to children without underlying medical conditions. Current evidence on which underlying medical conditions in children are associated with increased risk is limited. Children with the following conditions might be at increased risk for severe illness: obesity, medical complexity, severe genetic disorders, severe neurologic disorders, inherited metabolic disorders, congenital (since birth) heart disease, diabetes, asthma and other chronic lung disease, and immunosuppression due to malignancy or immune-weakening medications.

We do not yet know who is at increased risk for developing the rare but serious complication associated with COVID-19 in children called Multisystem Inflammatory Syndrome in Children (MIS-C), nor do we know what causes MIS-C. [Learn about MIS-C.](#)

The list of underlying conditions is meant to inform clinicians to help them provide the best care possible for patients, and to inform individuals as to what their level of risk may be so they can make individual decisions about illness prevention. We are learning more about COVID-19 every day. This list is not exhaustive and only includes conditions with sufficient evidence to draw conclusions; it is a living document that may be updated at any time, subject to potentially rapid change as the science evolves.

Reduce your risk of getting COVID-19

It is especially important for people at increased risk of severe illness from COVID-19, and those who live with them, to protect themselves from getting COVID-19.

The best way to protect yourself and to help reduce the spread of the virus that causes COVID-19 is to:

- Limit your interactions with other people as much as possible.
- Take precautions to prevent getting COVID-19 when you do interact with others.

If you start feeling sick and think you may have COVID-19, get in touch with your healthcare provider within 24 hours.

Venturing out into a public setting? What to consider before you go.

As communities and businesses across the United States are opening, you may be thinking about resuming some activities, running errands, and attending events and gatherings. There is no way to ensure you have zero risk of infection, so it is important to understand the risks and know how to be as safe as possible.

People at increased risk of severe illness from COVID-19, and those who live with them, should consider their level of risk before deciding to go out and ensure they are taking steps to protect themselves. Consider avoiding activities where taking protective measures may be difficult, such as activities where social distancing can't be maintained. Everyone should take steps to prevent getting and spreading COVID-19 to protect themselves, their communities, and people who are at increased risk of severe illness.

In general, the more people you interact with, the more closely you interact with them, and the longer that interaction, the higher your risk of getting and spreading COVID-19.

- If you decide to engage in public activities, continue to protect yourself by practicing everyday preventive actions.
- Keep these items on hand and use them when venturing out: a mask, tissues, and a hand sanitizer with at least 60% alcohol, if possible.
- If possible, avoid others who are not wearing masks or ask others around you to wear masks.

Are you considering in-person visits with family and friends? Here are some things to consider to help make your visit as safe as possible:

When to delay or cancel a visit

- Delay or cancel a visit if you or your visitors have symptoms of COVID-19 or have been exposed to someone with COVID-19 in the last 14 days.
- Anyone who has had close contact with a person with COVID-19 should stay home and monitor for symptoms.

In general, the more people you interact with, the more closely you interact with them, and the longer that interaction, the higher the risk of COVID-19 spread. So, think about:

- How many people will you interact with?
- Can you keep 6 feet of space between you and others?
- Will you be outdoors or indoors?
- What's the length of time that you will be interacting with people?

Encourage social distancing during your visit

- Visit with your friends and family outdoors, when possible. If this is not feasible, make sure the room or space is well-ventilated (for example, open windows or doors) and large enough to accommodate social distancing.
- Arrange tables and chairs to allow for social distancing. People from the same household can be in groups together and don't need to be 6 feet apart from each other.
- Consider activities where social distancing can be maintained, like sidewalk chalk art or yard games.
- Try to avoid close contact with your visitors. For example, don't shake hands, elbow bump, or hug. Instead wave and verbally greet them.
- If possible, avoid others who are not wearing masks or ask others around you to wear masks.
- Consider keeping a list of people you visited or who visited you and when the visit occurred. This will help with contact tracing if someone becomes sick.

Wear masks

- Masks should be worn over the nose and mouth. Masks are especially important when it is difficult to stay at least 6 feet apart from others or when people are indoors to help protect each other.

- Masks may slow the spread of the virus and help people who may have the virus and do not know it from transmitting it to others
 - Wearing a mask helps protect others in case you're infected, while others wear one to protect you should they be infected.
- **Who should NOT use masks:** Children under age 2 or anyone who has trouble breathing, is unconscious, or is incapacitated or otherwise unable to remove the mask without assistance.

Wash hands often

- Everyone should **wash their hands** for at least 20 seconds at the beginning and end of the visit and whenever you think your hands may have become contaminated.
- If soap and water are not readily available, such as with outdoor visits or activities, use a hand sanitizer that contains at least 60% alcohol. Cover all surfaces of your hands and rub them together until they feel dry.
- Remind guests to wash or sanitize their hands before serving or eating food.
- Use single-use hand towels or paper towels for drying hands so visitors do not share towels. Have a no-touch trash can available for guests to use.

Limit contact with commonly touched surfaces or shared items

- Encourage your visitors to bring their own food and drinks.
- **Clean and disinfect** commonly touched surfaces and any shared items between use.
- If you choose to use any shared items that are reusable (e.g., seating covers, tablecloths, linen napkins), wash, clean, and sanitize them after the event.

If you are thinking about participating in an event or gathering:

If you are at increased risk for severe illness, consider avoiding high-risk gatherings. The risk of COVID-19 spreading at events and gatherings increases as follows:

Lowest risk: Virtual-only activities, events, and gatherings.

More risk: Smaller outdoor and in-person gatherings in which individuals from different households remain spaced at least 6 feet apart, wear masks, do not share objects, and come from the same local area (e.g., community, town, city, or county).

Higher risk: Medium-sized in-person gatherings that are adapted to allow individuals to remain spaced at least 6 feet apart and with attendees coming from outside the local area.

Highest risk: Large in-person gatherings where it is difficult for individuals to remain spaced at least 6 feet apart and attendees travel from outside the local area.

Stay healthy during the COVID-19 pandemic

Staying healthy during the pandemic is important. Talk to your healthcare provider about whether your vaccinations and other preventive services are up to date to help prevent you from becoming ill with other diseases.

- It is particularly important for those at increased risk of severe illness, including older adults, to receive recommended vaccinations against influenza and pneumococcal disease.
- Talk with your healthcare provider about maintaining preventive services like **cancer screenings** during the pandemic.
- Remember the importance of staying **physically active** and practicing healthy habits to cope with stress.
- If you have a medical emergency, do not delay seeking emergency care.

If you have an underlying medical condition, you should continue to follow your treatment plan:

- Continue your medicines and do not change your treatment plan without talking to your healthcare provider.
- Have at least a 30-day supply of prescription and non-prescription medicines. Talk to a healthcare provider, insurer, and pharmacist about getting an extra supply (i.e., more than 30 days) of prescription medicines, if possible, to reduce your trips to the pharmacy.
- Do not delay getting emergency care for your underlying medical condition because of COVID-19. Emergency departments have contingency infection prevention plans to protect you from getting COVID-19 if you need care.
- Call your healthcare provider if you have any concerns about your underlying medical conditions or if you get sick and think that you may have COVID-19. If you need emergency help, call 911 right away.
- If you don't have a healthcare provider, contact your nearest [community health center](#) or health department.

Protect Your Health This Flu Season

Getting a flu vaccine during 2020-2021 is more important than ever because of the ongoing COVID-19 pandemic. Flu vaccination is especially important for people who are at high risk from flu; many of whom are also at high risk for COVID-19 or serious outcomes.

People at High Risk For Flu Complications

COVID-19 Hospitalization and Death by Age

COVID-19 Hospitalization and Death by Race/Ethnicity

1/2

Actions you can take based on your medical conditions and other risk factors

Asthma (moderate-to-severe)

Having moderate-to-severe asthma may increase your risk for severe illness from COVID-19.

Actions to take

- Keep your asthma under control by following your Asthma Action Plan.
- Continue your current medicines, including any inhalers with steroids in them ("steroids" is another word for corticosteroids). Know how to use your inhaler. Avoid your asthma triggers.
- Make sure that you have at least a 30-day supply of your medicines.
- Call your healthcare provider if you have concerns about your condition or feel sick. If you don't have a healthcare provider, contact your nearest [community health center](#) or health department.
- Have another member of your household who doesn't have asthma clean and disinfect your house for you. When they use cleaning and disinfecting products, have them:

- Make sure that people with asthma are not in the room.
- Avoid using disinfectants known to trigger asthma attacks.
- Open windows or doors and use a fan that blows air outdoors.
- Always follow the instructions on the product label.
- Spray or pour spray products onto a cleaning cloth or paper towel instead of spraying the product directly onto the cleaning surface (if the product label allows).

[Learn more about asthma.](#)

Cancer

Having cancer currently increases your risk of severe illness from COVID-19. At this time, it is not known whether having a history of cancer increases your risk.

Actions to take:

- Have a conversation with your healthcare provider or care team to discuss your individual level of risk based on your condition, your treatment, and the level of transmission in your community.
- Do not stop taking your medicines or alter your treatment plan without talking to your healthcare provider.
- Make sure that you have at least a 30-day supply of your medicines.
- Do not delay life-saving treatment or emergency care.
- Call your healthcare provider or care team if you have concerns about your condition, your treatment, think you may have been exposed to COVID-19, or any other questions.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.
- For more information on preventing infections for people with cancer.

[Learn more about cancer.](#)

Chronic kidney disease

Having chronic kidney disease of any stage increases your risk for severe illness from COVID-19.

Actions to take

- Continue your medicines and your diet as directed by your healthcare provider.
- Make sure that you have at least a 30-day supply of your medicines.
- Stay in contact with your healthcare team as often as possible, especially if you have any new signs or symptoms of illness. Also reach out to them if you can't get the medicines or foods you need.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.
- Have shelf-stable food choices to help you follow your kidney diet.
- If you are on dialysis:
 - Contact your dialysis clinic and your healthcare provider if you feel sick or have concerns.
 - Do NOT miss your treatments.
 - Plan to have enough food on hand to follow the [KCER 3-Day Emergency Diet Plan](#)  for dialysis patients in case you are unable to maintain your normal treatment schedule.

[Learn more about kidney disease.](#)

Learn how to take care of your kidneys.

COPD, cystic fibrosis, pulmonary fibrosis, and other chronic lung diseases

Having COPD (including emphysema and chronic bronchitis) is known to increase your risk of severe illness from COVID-19. Other chronic lung diseases, such as idiopathic pulmonary fibrosis and [cystic fibrosis](#), may increase your risk of severe illness from COVID-19.

Actions to take

- Keep taking your current medicines, including those with steroids in them (“steroids” is another word for corticosteroids).
- Make sure that you have at least a 30-day supply of your medicines.
- Avoid triggers that make your symptoms worse.
- Call your healthcare provider if you have concerns about your condition or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.

Learn more about COPD.

Diabetes

Having type 2 diabetes increases your risk of severe illness from COVID-19. Based on what we know at this time, having type 1 or gestational diabetes may increase your risk of severe illness from COVID-19.

Actions to take

- Continue taking your diabetes pills and insulin as usual.
- Test your blood sugar and keep track of the results, as directed by your healthcare provider.
- Make sure that you have at least a 30-day supply of your diabetes medicines, including insulin.
- Follow your healthcare provider's instructions if you are feeling ill as well as the [sick day tips for people with diabetes](#).
- Call your healthcare provider if you have concerns about your condition or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.

Learn more about diabetes.

Heart Conditions and Other Cardiovascular and Cerebrovascular Diseases

Having any of the following serious heart conditions increases your risk of severe illness from COVID-19:

- Heart failure
- Coronary artery disease
- Cardiomyopathies
- Pulmonary hypertension

Having other cardiovascular or cerebrovascular disease, such as hypertension (high blood pressure) or stroke, may increase your risk of severe illness from COVID-19.

Actions to take

- Take your medicines exactly as prescribed and follow your healthcare provider's recommendations for diet and exercise while maintaining social distancing precautions.
- Continue angiotensin converting enzyme inhibitors (ACE-I) or angiotensin-II receptor blockers (ARB) as prescribed by your healthcare provider for indications such as heart failure or high blood pressure.
- Make sure that you have at least a 30-day supply of your heart disease medicines, including high cholesterol and high blood pressure medicines.
- Call your healthcare provider if you have concerns about your condition or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#) or health department.
- Do not delay life-saving treatment or emergency care.

[Learn more about serious heart conditions.](#)

[Learn more about heart disease.](#)

[Learn more about high blood pressure.](#)

Hemoglobin disorders such as sickle cell disease and thalassemia

Having sickle cell disease (SCD) increases your risk for severe illness from COVID-19. Having other hemoglobin disorders, like thalassemia, may increase your risk for severe illness from COVID-19.

Actions to take

- Ask your healthcare provider about telemedicine or remote healthcare visits, and know [when to go to the emergency department](#).
- Work with your healthcare provider to manage [medicines and therapies](#) for your disorder (including hydroxyurea, chelation therapy, blood transfusions, and prescriptions for pain management) and any other health condition you may have (such as diabetes, high blood pressure, and arthritis).
- If you don't have a healthcare provider, contact your nearest [community health center](#) or health department.
- Try to prevent vaso-occlusive episodes or pain crises by [avoiding possible triggers](#).
- Review CDC's [healthy living with SCD guide](#) or our [healthy living with thalassemia guide](#) for tips to help you stay healthy.
- Find [SCD resources](#) and [thalassemia resources](#) to help navigate care and increase knowledge and awareness of SCD and thalassemia.
- Let friends and family know about the need for [healthy blood donors](#).

[Learn more about blood disorders.](#)

Immunocompromised state (weakened immune system) from blood, bone marrow, or organ transplant; HIV; use of corticosteroids; or use of other immune weakening medicines

Many conditions and treatments can cause a person to be immunocompromised or have a weakened immune system. These include: having a solid organ transplant, blood, or bone marrow transplant; [immune deficiencies](#); HIV with a low CD4 cell count or not on HIV treatment; prolonged use of corticosteroids; or use of other immune weakening medicines. Having a weakened immune system may increase your risk of severe illness from COVID-19.

Actions to take

- Continue any recommended medicines or treatments and follow the advice of your healthcare provider.
- Do not stop taking your medicines without talking to your healthcare provider.
- Make sure that you have at least a 30-day supply of your medicines.
- Do not delay life-saving treatment or emergency care.
- Call your healthcare provider if you have concerns about your condition or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.

Information for people living with HIV.

Liver disease

Having chronic liver disease, especially cirrhosis (scarring of the liver), may increase your risk for severe illness from COVID-19.

Actions to take

- Take your medicines exactly as prescribed.
- Make sure that you have at least a 30-day supply of your medicines.
- Call your healthcare provider if you have concerns about your condition or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.

Coronavirus Disease

MENU >

Neurologic conditions such as dementia

Having neurologic conditions such as dementia may increase your risk of severe illness from COVID-19.

Actions to take

- Take your medicines as prescribed.
- Make sure that you have at least a 30-day supply of your medicines.
- Call your healthcare provider if you have concerns about your condition or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.

Overweight, Obesity and Severe Obesity

Having obesity, defined as a **body mass index (BMI)** between 30 kg/m² and <40 kg/m² or severe obesity (BMI of 40 kg/m² or above), increases your risk of severe illness from COVID-19. Having overweight, defined as a BMI > 25 kg/m² but less than 30 kg/m² might increase your risk of severe illness from COVID-19.

Actions to take

- Take your prescription medicines for overweight, obesity or severe obesity exactly as prescribed.
- Follow your healthcare provider's recommendations for nutrition and physical activity, while maintaining social distancing precautions.
- Call your healthcare provider if you have concerns or feel sick.
- If you don't have a healthcare provider, contact your nearest community health center [📍](#) or health department.

Pregnancy

Based on what we know at this time, pregnant people might be at an increased risk for severe illness from COVID-19 compared to non-pregnant people. Additionally, there may be an increased risk of adverse pregnancy outcomes, such as preterm birth, among pregnant people with COVID-19.

Actions to take

- Do not skip your prenatal care appointments.
- Make sure that you have at least a 30-day supply of your medicines.
- Talk to your healthcare provider about how to stay healthy and take care of yourself during the COVID-19 pandemic.
- If you don't have a healthcare provider, contact your nearest community health center [📍](#) or health department.
- Call your healthcare provider if you have any questions related to your health.
- Seek care immediately if you have a medical emergency.
- You may feel increased stress during this pandemic. Fear and anxiety can be overwhelming and cause strong emotions. Learn about [stress and coping](#).

[Learn more about pregnancy and COVID-19.](#)

Smoking

Being a current or former cigarette smoker increases your risk of severe illness from COVID-19.

Actions to take

- If you currently smoke, quit. If you used to smoke, don't start again. If you've never smoked, don't start.
- Counseling from a healthcare provider and Food and Drug Administration (FDA)-approved medications can double the chances of quitting smoking.
- For help quitting smoking, call 1-800-QUIT-NOW or visit smokefree.gov [📍](#) .
- Call your healthcare provider if you have concerns or feel sick.
- If you don't have a healthcare provider, contact your nearest community health center [📍](#) or health department.

Learn about smoking and tobacco use.

Learn about the health effects of cigarette smoking.

Children with Certain Underlying Conditions

As noted above, children can be infected with the virus that causes COVID-19 and some children develop severe illness. Children with underlying medical conditions are at increased risk for severe illness compared to children without underlying medical conditions.

Actions to take

- Give medicines as prescribed for your child's underlying conditions.
- Make sure that you have at least a 30-day supply of your child's medicines.
- Call your child's healthcare provider if you have concerns and to discuss your child's specific conditions and risk for severe illness from COVID-19.
- Well-child visits and vaccines are still important during the COVID-19 pandemic. Stay in contact with your child's healthcare provider and make sure your child is up to date with vaccines to prevent other diseases. Learn more about [how to protect yourself and your family during the COVID-19 pandemic](#).
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.

Learn about preventing illness in your children.

Learn more about congenital heart disease and specific genetic and neurologic disorders in children.

People with Multiple Underlying Conditions

The more underlying medical conditions someone has, the greater their risk is for severe illness from COVID-19.

Actions to take

- Continue your medicines and treatment plans as directed by your healthcare provider.
- Make sure that you have at least a 30-day supply of your medicines.
- Call your healthcare provider if you have any concerns or feel sick.
- If you don't have a healthcare provider, contact your nearest [community health center](#)  or health department.
- Do not delay emergency care.

When to Quarantine

When to Quarantine

Stay home if you might have been exposed to COVID-19

Updated Sept. 10, 2020

Note:

At this time, we have limited information about reinfections with the virus that causes COVID-19. This is a new virus, and CDC is actively working to learn more. We will provide updates as they become available. Data to date show that a person who has had and recovered from COVID-19 may have low levels of virus in their bodies for up to 3 months after diagnosis. This means that if the person who has recovered from COVID-19 is retested within 3 months of initial infection, they may continue to have a positive test result, even though they are not spreading COVID-19.

There are no confirmed reports to date of a person being reinfected with COVID-19 within 3 months of initial infection. However, additional research is ongoing. Therefore, if a person who has recovered from COVID-19 has new symptoms of COVID-19, the person may need an evaluation for reinfection, especially if the person has had close contact with someone infected with COVID-19. The person should isolate and contact a healthcare provider to be evaluated for other causes of their symptoms, and possibly retested.

CDC recommends that all people, whether or not they have had COVID-19, take steps to prevent getting and spreading COVID-19. Wash hands regularly, stay at least 6 feet away from others whenever possible, and wear masks.

For more information:

- [Media statement](#)
- [Information for Healthcare Professionals](#)

Quarantine is used to keep someone *who might have been exposed to COVID-19* away from others. Quarantine helps prevent spread of disease that can occur before a person knows they are sick or if they are infected with the virus without feeling symptoms. People in quarantine should stay home, separate themselves from others, monitor their health, and follow directions from their state or local health department.

Quarantine or isolation: What's the difference?

Quarantine keeps someone who might have been exposed to the virus away from others.

Isolation keeps someone who is infected with the virus away from others, even in their home.

Who needs to quarantine?

People who have been in close contact with someone who has COVID-19—excluding people who have had COVID-19 within the past 3 months.

People who have tested positive for COVID-19 do not need to quarantine or get tested again for up to 3 months as long as they do not develop symptoms again. People who develop symptoms again within 3 months of their first bout of COVID-19 may need to be tested again if there is no other cause identified for their symptoms.

What counts as close contact?

- You were within 6 feet of someone who has COVID-19 for a total of 15 minutes or more
- You provided care at home to someone who is sick with COVID-19
- You had direct physical contact with the person (hugged or kissed them)
- You shared eating or drinking utensils
- They sneezed, coughed, or somehow got respiratory droplets on you

Steps to take

Stay home and monitor your health

- Stay home for 14 days after your last contact with a person who has COVID-19
- Watch for fever (100.4°F), cough, shortness of breath, or [other symptoms](#) of COVID-19
- If possible, stay away from others, especially people who are at [higher risk](#) for getting very sick from COVID-19

When to start and end quarantine

You should stay home for 14 days after your last contact with a person who has COVID-19.

For all of the following scenarios, even if you test negative for COVID-19 or feel healthy, you should stay home (quarantine) since symptoms may appear 2 to 14 days after exposure to the virus.

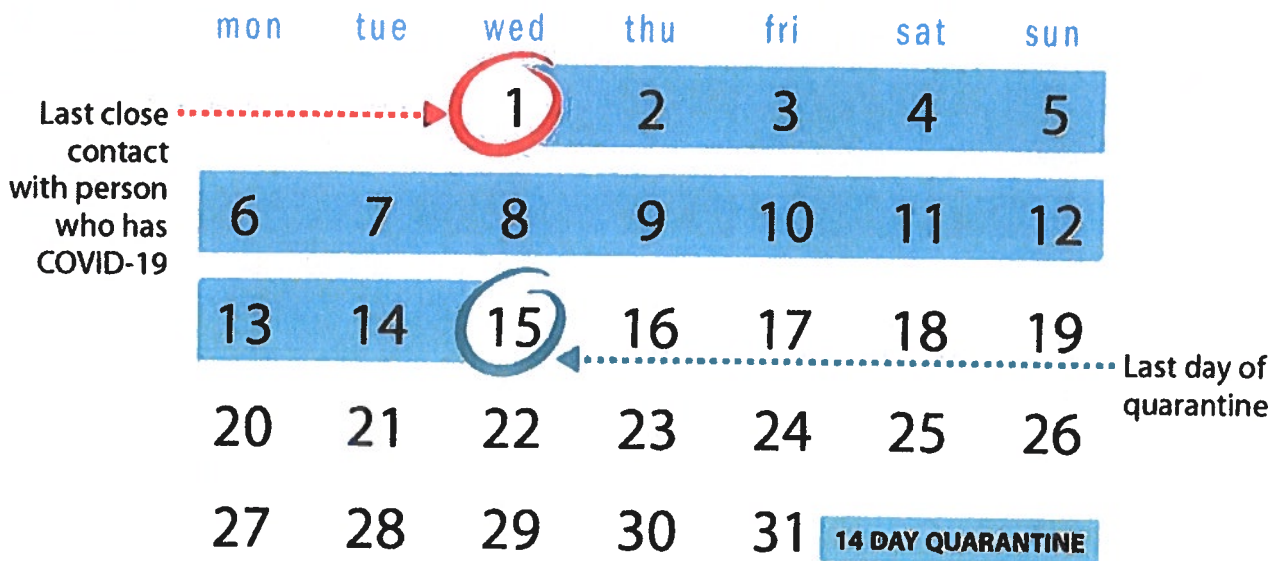

See scenarios below to determine when you can end quarantine and be around others.

Scenario 1: Close contact with someone who has COVID-19—will not have further close contact

I had close contact with someone who has COVID-19 and will not have further contact or interactions with the person while they are sick (e.g., co-worker, neighbor, or friend).

Your last day of quarantine is 14 days from the date you had close contact.

Date of last close contact with person who has COVID-19 + 14 days = end of quarantine

Please note if your quarantine starts at noon on day 1, then it would end at noon on the last day.

Scenario 2: Close contact with someone who has COVID-19—live with the person but can avoid further close contact

I live with someone who has COVID-19 (e.g., roommate, partner, family member), and that person has isolated by staying in a separate bedroom. I have had no close contact with the person since they isolated.

Your last day of quarantine is 14 days from when the person with COVID-19 began home isolation.

Date person with COVID-19 began home isolation + 14 days = end of quarantine

Coronavirus Disease

[MENU >](#)

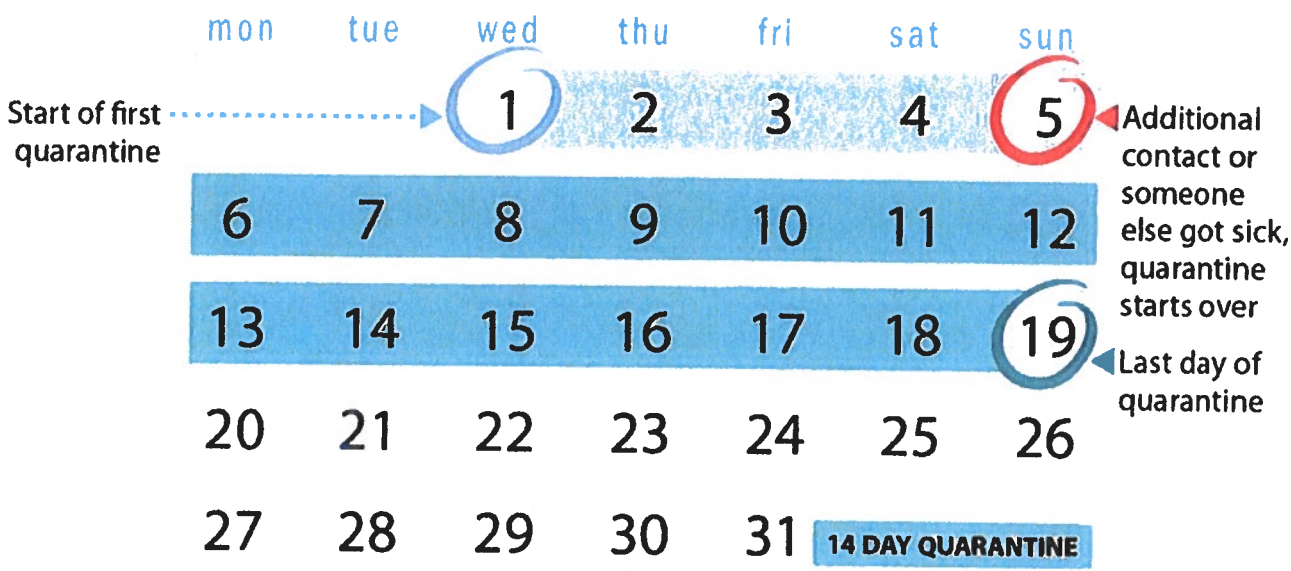

Please note if your quarantine starts at noon on day 1, then it would end at noon on the last day.

Scenario 3. Under quarantine and had additional close contact with someone who has COVID-19

I live with someone who has COVID-19 and started my 14-day quarantine period because we had close contact. What if I ended up having close contact with the person who is sick during my quarantine? What if another household member gets sick with COVID-19? Do I need to restart my quarantine?

Yes. You will have to restart your quarantine from the last day you had close contact with anyone in your house who has COVID-19. Any time a new household member gets sick with COVID-19 and you had close contact, you will need to restart your quarantine.

Date of additional close contact with person who has COVID-19 + 14 days = end of quarantine

Please note if your quarantine starts at noon on day 1, then it would end at noon on the last day.

Scenario 4: Live with someone who has COVID-19 and cannot avoid continued close contact

I live in a household where I cannot avoid close contact with the person who has COVID-19. I am providing direct care to the person who is sick, don't have a separate bedroom to isolate the person who is sick, or live in close quarters where I am unable to keep a physical distance of 6 feet.

You should avoid contact with others outside the home while the person is sick, and quarantine for 14 days after the person who has COVID-19 meets the criteria to end home isolation.

Date the person with COVID-19 ends home isolation + 14 days = end of quarantine

Please note if your quarantine starts at noon on day 1, then it would end at noon on the last day.
